- We recommend an update to your payments, based on your forecast energy use and current prices
- We recommend monthly payments of £539.06
- You don't need to do anything if you're happy with our recommendation, but you're in control: tailor your payments below
- If you're having difficulty with your payments, this blog (<https://octopus.energy/blog/energy-crisis-information/>) post outlines all the help available from the Government, Octopus, and others, plus how to access it

Hi Mark,

First of all, let me say: If you're ever having difficulty paying, this blog post (<https://octopus.energy/blog/energy-crisis-information/>) outlines all the help available from the Government, Octopus, and others, plus how to access it.

We continually review your account balance and monthly payments to help keep your account on track.

Without a change to your monthly payments, we expect you to owe £2,562.69 by this time next year.

That's why we recommend updating your monthly payments to £539.06. This includes:

- £224.47 per month for your future energy use at current prices for the next 12 months
- £290.14 per month until May 2025 to get your account balance back on track

Our Balance Forecast tool can help you see how your monthly payments affect your account balance over time - if you're thinking of changing your monthly payments, you should take a look first: <https://octopus.energy/dashboard/new/accounts/balance-forecast>

If you'd like to better understand your energy account balance over time, take a look at Balance Forecast in your online account: <https://octopus.energy/dashboard/new/accounts/balance-forecast>

If you're happy with our recommendations, you don't need to do anything. We'll adjust your payments automatically, starting from your next monthly payment.

Of course, it's your energy account and you're in control - so if you'd like to set your payments to a different amount, you can do that here: <https://octopus.energy/pa/accounts/A-A7CD64F4/9f6cfbcc3bf10abeb9dbf6f420bfb98ec503c4ab/112200944/55951495/edit/>

Your future energy costs

As well as the price you pay, your official usage estimate is a major factor in our forecast for your future costs. Every UK home has an official estimate based on historical meter readings and weather patterns. It's updated each time we

receive a meter reading, and passed to your new supplier when you switch.

If there's big changes in how energy is used in your home, it can take a few meter readings to re-tune it. The best way to ensure it's accurate is to submit a meter reading here: https://octopus.energy/meter-readings/meter/?headless=False&account_number=A-A7CD64F4&hash=47cd549776b0ee2b943a419ad135c7eedcf0c045

By default, we spread the cost of your energy over 12 months, rather than paying more in winter and less in summer. However, you can also choose to pay your energy costs in full each month and not worry about the accuracy of future estimates. If you'd like to pay your account in full each month, just reply and let us know - you'll typically pay about 40% of your annual energy costs over December, January and February.

Your account balance

Our recommendation is designed to get your balance back on track over 12 months - your account balance needs another £3,775.08 to be on track for this time of year.

Just reply to this email if you think we've got something wrong, or if you'll have difficulties making the new payments, and we'll get back to you promptly.

We'll continue to review your account regularly to check your Direct Debit is set to the right amount.

Love and power,

The Octopus Energy team

PS. In the current environment, it's important you get the support you're entitled to. We've put together this blog post (<https://octopus.energy/blog/energy-crisis-information/>) which outlines all the help available and how to get it.
